Grammetry ArchBridge is the intraoral scanner (IOS) scan body alternative to photogrammetry. It enables clinicians to experience all of the benefits of photogrammetry without experiencing photogrammetry's unique challenges.

In order to achieve highly accurate intraoral IOS full-arch scans, during surgery and in the restorative process, we must overcome the inaccuracies of scanning soft tissue, blood, saliva, movement, and repeated objects. The way to accomplish this is to use the ArchBridge™ system.
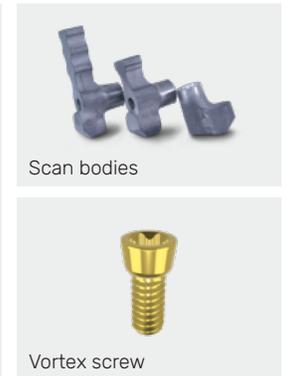

Key benefits:

- Highly accurate
- Economical and reusable
- Restorative efficiencies - go straight to final with IOS
- Highly scalable to your practice
- Compatible with any implant system and guided kit
- Compatible with multiple surgical methods
- Can be used alongside photogrammetry or as a photogrammetry alternative

Discover how Grammetry ArchBridge is transforming implant dentistry and try it for your next case.

ArchBridge Kit

- ✓ **10x ArchBridge Titanium Scan Bodies**
- ✓ **6x Vortex Screws**
- ✓ **6x Prosthetic Scanalogs**
- ✓ **1x 32mm Driver**
- ✓ **1x Vortex Driver Universal Hub**

Total: **$999** /kit
