12-1pm or 3-4pm EST

Online webinar

Want to turn patient consultations into confident case acceptances by showing them their future smile? Ready to leverage 3D printing technology to deliver more predictable cosmetic results?

Then this webinar is for you.

Course Description

In modern cosmetic dentistry, the gap between what patients imagine and what they can visualize often determines whether they commit to treatment. This webinar explores how **3D-printed trial smiles** bridge that gap, transforming abstract possibilities into tangible previews that patients can see and feel.

By allowing patients to experience their future smile before any irreversible procedures begin, you'll discover how this technology not only elevates case acceptance rates but also builds trust, manages expectations, and delivers consistently exceptional outcomes. Through practical workflows and real-world examples, you'll gain the tools to integrate this powerful technology into your practice and turn consultations into confident commitments.

Learning Objectives

- Understand how 3D-printed trial smiles help patients visualize their final results and enhance treatment planning
- Learn the psychological principles that drive case acceptance and patient decision-making
- Master the digital workflow from initial design through 3D printing to final restoration
- Analyze a complete case study demonstrating the journey from trial smile to 3D-printed prototypes to final ceramic restorations

Dental Implant Trainers, LLC is a Nationally Approved PACE program for FAGD/MAGD credit. Approval does not imply acceptance by any regulatory authority or AGD endorsement. The current term of approval extends from 4/1/2024 to 3/31/2027. Provider ID# 386016
